

The CAREs Grant Program

The COVID-19 pandemic deepened health disparities, including the gap in average life expectancy and outcomes for many chronic diseases across race, gender, and geographic location. But, health disparities have deep roots in the U.S. where it is well documented that communities of color have a higher prevalence of preventable, chronic diseaseⁱ and tend to be diagnosed and treated later than white Americans.^{ii, iii, iv}

PhRMA believes that diversity, equity, and inclusion are essential to the discovery of new medicines and that people of all ethnic and racial backgrounds should have equitable access to treatment.^v We are committed to addressing the many interwoven social determinants of health that allow health inequities to arise and persist.^{vi} Moreover, we believe addressing inequities requires connecting with and learning from affected communities directly.

Recognizing that each community faces unique barriers, PhRMA established the Collaborative Actions to Reach Equity (CAREs) grant program in April 2020. The CAREs grant program aims to support community-centered solutions to address health inequities through partnership with community-led organizations. These awards support local and national activities and research to drive meaningful change on the ground to advance health equity. The CAREs grant program not only supports the efforts of grantees to advance equity, it also helps support the identification of community-led best practices toward scalable, practical interventions that can be applied to other communities, disease states, or public health concerns to advance health equity.

Breaking Down Barriers to COVID-19 Vaccination for African and African Americans Bridge-Pamoja in Portland, Oregon

Bridge-Pamoja is a network of faith leaders and culturally specific organizations dedicated to addressing unique needs of African and African American communities in the Portland, Oregon area through grassroots and community-based efforts. Bridge aims to break down barriers to the uptake of COVID-19 vaccines by local African and African American communities using a three-pronged approach: 1) partner with state officials to track how many Africans and African Americans successfully complete doses of COVID-19 vaccines, 2) monitor how the state government partners with Black-led organizations (including houses of worship) for outreach to the African and African American communities regarding COVID-19 vaccination, and 3) host virtual forums with Black community and faith leaders to address the successes and challenges of the state's COVID-19 vaccination outreach process.
